

# Software AG Government Solutions

for Child Support Enforcement

## Experience with Child Support Systems

Did you know that 14 states utilize Software AG for their Child Support Enforcement Systems?

## Why Modernize with Software AG Government Solutions?

No matter your approach to Modernization – leveraging the webMethods integration platform is the right call. Software AG’s deep experience with all forms of legacy applications (especially Mainframe applications) provides the base for all Modernization efforts, no matter the form they take. Automated screen testing strikes the proper balance between ensuring functions operate as required and the correct output is displayed to the user.

- Incremental Modernization – The quickest and least risky path to improving citizens’ digital experience and reaping operational improvements. With webMethods you can leverage the data on the legacy applications and present it in a modernized form (e.g. SaaS, Mobile). All can be done in real-time with bi-directional replication to keep a source of truth intact. Prioritize the functions that will bring the biggest value and bring them to market faster with incremental modernization.
- Re-hosting (“get off the mainframe”) – If your goal of modernization is really centered around “Getting off the Mainframe” to save operational expenses, then re-hosting may be the way to go. webMethods provides the tools to migrate from legacy platforms to open systems platforms that can be hosted in your own data center or in the cloud.
- Program Re-write – Most states are now realizing that attempting to re-write legacy applications from soup-to-nuts and publish after incorporating all the business logic written in to the new platform is highly risky, takes many years to complete and is very expensive. However, due to outside factors, states still may choose this path. webMethods will not only help with the migration of the data from the legacy platform but also incorporate the data from all the external systems that your new program will need to access.
